# Company Profile

Guanma medical is a professional manufacturer specializing in medical adhesive tapes and wound care dressings. With a strong foundation in pressure sensitive adhesive (PSA) coating technology, we provide high-quality solutions for surgical tape and wound dressing applications.

Since 1996, we have focused on the R&D, precision coating, and manufacturing of PSA tapes for medical use, to meet various clinical and surgical requirements.

Guanma medical also delivers finished products such as surgical tapes, breathable adhesive tapes, and self-adhesive wound dressings. We strives to be your reliable partner in medical tape manufacturing and wound care product supply.

## 1 Medical Tape Coating

As a specialist in pressure-sensitive adhesive coating, we offer comprehensive solutions for various medical tape coating needs.

## 2 Wound Dressing

Silicone Foam, silicone, clear PU, nonwoven and more.

## 3 Sports Tape

Rigid, PE foam, zinc oxide, kinesiology, cotton.

## 4 Surgical Tape

Silk, perforated polyethylene, nonwoven paper.

## 5 Operating Room Adhesive Products

Surgical drape film and medical double-sided adhesive tape for surgical applications.

## 6 medical consumables

Absorbent pad, cold seal paper, release paper

## Cotton Fabric

Medical cotton fabric jumbo rolls are primarily used as high-quality raw materials for the production of various medical products. Typical applications include medical adhesive tapes, band-aids and wound plasters, medical bandage tapes, surgical dressing base materials, sports bandages and kinesiology tapes, as well as pressure-sensitive adhesive products. The fabric offers excellent breathability, flexibility, and skin-friendliness, making it ideal for a wide range of medical and healthcare applications.

## Absorbent Pad

Medical absorbent pads are a core absorbent layer used in band-aids that are made of highly absorbent materials such as cellulose or polymer absorbents that rapidly absorb wound secretions, keep wounds dry, reduce the risk of infection, and provide comfort and protection to promote wound healing.

## Release Paper

Medical tape glassine backing paper is a white, smooth, and waterproof paper material widely used in the production of medical tapes. It offers good tensile strength and stability, effectively protecting the adhesive properties of the tape and ensuring that the product maintains good adhesion and durability during use.

Jumbo roll 1090mm\*1000m  
**Weight:** 60gsm, 80gsm,  
100gsm, 120gsm

★ Higher Quality

## 3 Step Inspection Process

We utilize strict quality inspection methods and all products are subjected to a number of standard tests, including quality control of raw materials, production processes and finished products, to ensure that each batch meets high quality standards.

1

### ***Production Line Operator***

During the production process, the operator continuously monitors the state of the material, focusing on the uniformity of the glue application. Based on real-time feedback and material characteristics, operators flexibly adjust parameters such as gluing volume, speed and pressure to maintain production stability and product consistency.

2

### ***Quality inspector***

During the production process, a professional quality inspector inspects each product, records it, and retains samples to send to the laboratory.

3

### ***Laboratory Inspector***

Laboratory inspectors test and record data through a variety of testing equipment. Samples are preserved and can be traced if there is any feedback from customers.
